Image1 Collaboration

The main focus of this workshop is a joint workshop with the University of Rome Sapienza in Italy. We stayed there for three weeks. The University of Rome Sapienza is one of the oldest universities in the world and is located in the heart of Rome. In addition to acquiring specialized knowledge and skills through workshops in English as the main language, experiencing urban space and architecture in and around the city was also an important learning experience. The theme of the workshop was temporary housing and reconstruction housing after natural disasters and influx of refugees. While Japan and Italy have very different historical and cultural backgrounds, considering the common theme of disasters and architecture among countries that have many earthquakes has brought great awareness and learning.
