As was done in 2018, the gPBL was again done with Royal Melbourne Institute of Technology (RMIT) this year. Thirteen RMIT undergraduate students joined the program and had technical discussions with five SIT undergraduate students in our department. They visited R&D center at Ohta ward, Tokyo (called TECHNOCORE), and based on the high-tech engineering they saw there, they proposed new products and technology applications after having their discussions. They made midterm and final presentations in English. END
