The gPBL in China (b) gave the opportunities for students to understand the concepts and technologies applied in the major urban development in Tokyo by visiting the Urban Renaissance Agency presentation room, R&D center of the industrialized house company and the construction site which uses the Precast Concrete elements to increase the productivity of the site work. The participants visited may city cores in Tokyo like Shibuya, Shinjuku, Ikebukuro, Ginza and Marunouchi to analyze the characteristics of the recent urban design in Japan. Seventeen students of Huangshan University in China visited Japan from May 28th to June 6th in 2019 to join this program.
