ISDW is about having open hearts and open minds. By bringing people open to new ideas together to share and collaborate, we can learn new perspectives and understand each other better, ultimately leading to global friendships and a more peaceful world. This year, 52 students and 6 faculty members from 5 universities in 4 countries participated in the workshop, which was held online for 8 days from August 22 to 29, and we had lively discussions every day until late at night, resulting in excellent proposals.

The International Summer Design Workshop (ISDW) has been held annually since 2008. University students from multiple countries in the Asia Pacific region collaborate with each other to create a design proposal. Through this, students develop:  
 design skills  
 communication skills  
 intercultural awareness
